Dear Planning Board,

I am writing to request that you carefully review the impact of the MVC's decision to approve the plastic fields.

If we do not do something here - where we are teaching our children about the importance of climate change - in a moment where climate change - is not only clear, proven and impacting millions of lives, than we have surely failed our children. There is one aquifer on the island, where these toxins run off into. I am a certified holistic nutritionist, entrepreneur and I have worked with hundreds of adults and children alike to remove toxicity from their bodies. We increase the likelihood and severity of diseases such as cancer, lung diseases, and other chronic diseases when we add more toxins to our air and water. Health is that simple - more toxins = more disease. More inflammation = more disease. More toxicity in our water = more degradation of our water, our planet, which causes a vicious cycle of environmental pollution that effects our health and home. And no one is separate from the environmental toxins that one company, organization or country pollutes.

The data is clear and logical, and you **are in the position to make change**. Please deny the MVC and MVRHS the plastic field. Anything otherwise is negligent of the health of our children and the planet. It is that simple.

Kindly,
Ky
